XSlide™ Positioning System

Long life, precise movement, greater value

Manual and Motorized

Compact Positioning Stage

Ideal for limited space applications

VELMEX, INC.
Positioning Systems for Science and Industry
Velmex Versatility

Velmex positioning products provide a variety of precise, yet simple, modular configurations to satisfy a broad range of applications where high precision and value are essential. Velmex applications are limited only by your imagination. For example:

- Measurement
- Antenna Alignment
- Automation
- Camera Positioning
- Film and Animation Work
- Inspection and QA/QC
- Medical And Biological Analysis
- Moving Probes, Sensors, Components
- Optical Focusing
- Photonics
- Pick and Place
- Prototyping
- Research and Testing
- Workhold Fixturing and Light Industrial
- And thousands of other uses.

You are not limited to off-the-shelf items. Every Velmex product is built to order. We can customize your device to meet your exact requirements with:

- Rapid, standard or fine motion
- Locks
- Counters and Scales
- Position Encoders
- Special Finishes
- Prep for Special Environments
- Framing
- Plates and Brackets

Velmex’s very broad range of positioning equipment for science and industry delivers quality, precision, selection and value.
The Velmex XSlide is a compact positioning stage highly suitable for either high performance incrementing or scanning of smaller loads. Their compact design makes them ideal for limited space applications. Constructed with hard-coat anodized, aluminum dovetail ways and smooth motion PTFE bearings; XSlides deliver higher rigidity for longer life and more precise movement when compared to other dovetail designs. XSlides have a load capacity of 35 lbs. (15.9 kg.) horizontally and 10 lbs. (4.5 kg.) vertically.

Straight-line accuracy is 0.001"/10" (0.076 mm/25 cm). Repeatability is 0.0001 inch (0.00025 mm).

The carriage rides on the outside of the ways allowing for a more compact design and easier access for adjustments. With a cross-sectional profile of 1.88" (48 mm) by 1.22" (31 mm), the XSlide comes in eight standard travel lengths from 2" (50 mm) to 30" (76.2 cm). XSlides can be manually-operated or motor-driven.
XSlide™ Configurations - Manual and Motorized Slides

XSlide Applications

Because of their compact design, XSlides are ideal for limited space applications. They can be used in most applications that also use the larger UniSlides® and BiSlides® including scientific, medical, industrial, optical, inspection and scanning applications. The systems can be used to position, align, measure, test, fixture and machine, to name a few of the functional uses.

**Axis Configurations**

- **X**
- **XY**
- **XZ**
- **XYZ**

---

**Coefficient of friction:**
0.09 typical

**Minimum motor torque required:**
25 oz-in (0.18 N-M)

**Repeatability:**
0.0001” over short term, long term dependent on wear

**Straight line accuracy:**
0.001”/10” (0.025mm/25cm)

**Screw lead accuracy:**
0.003”/10” (0.076 mm/25 cm) 0.0015”/10” available. Consult factory.

**Operating temperature:**
0 to 180° F (-18 to 82° C)

**Lead screw**
Stainless steel or hard nickel plated

**Carriage**
Machined aluminum

**Other surfaces**
Hard alloy, black anodized aluminum

---

**Loads**

Combining XSlides in XY or XYZ configurations can create a cantilever load. In these configurations the X axis carries the weight of the Y axis and/or Z axis and the attached payload.

Refer to the chart on the right for the maximum loads allowed.

**Normal (L_N)**

**Inverted (L_I)**

**Cantilever Inline (L_CI)**

**Edge (L_E)**

**Thrust**

**Cantilever Side (L_CS)**

The slider / carriage (shaded area in the cross-section above) rides on the outside of the dovetail ways allowing for a more compact design and easier access for adjustments.
**XSlide® Options and Accessories**

**Cleats** – Cleats are used to mount the XSlide assembly to a surface and to configure two XSlides as XY or XZ axis. One pair of cleats has 190 lbs of holding capability. Use in pairs only.

**Gussets** – Use as end mounting for vertical XSlide assemblies perpendicular to the X or Y plane. The gusset provides higher rigidity. They are available in various sizes for vertical and gantry mounting.

**Mounting bolts and other hardware** – For use with the cleats to create strong, secure attachments.

**Adapter Plates and Spacers** – A variety of adapter plates to mount XSlides to other Velmex products like BiSlides and Rotary Tables. There are also adapter plates with spacers to carry larger payloads.

**Gussets** – Use as end mounting for vertical XSlide assemblies perpendicular to the X or Y plane. The gusset provides higher rigidity. They are available in various sizes for vertical and gantry mounting.

**Mounting bolts and other hardware** – For use with the cleats to create strong, secure attachments.

**Adapter Plates and Spacers** – A variety of adapter plates to mount XSlides to other Velmex products like BiSlides and Rotary Tables. There are also adapter plates with spacers to carry larger payloads.

**Additional Carriages** – Additional carriages (sliders) can be added to all models of BiSlides to increase the carrying capacity of the slide. Carriages can be driven or floating.

**Home Switch** – A magnetic reed home switch sets and returns the carriage to home (starting) position. This is moveable. (Available on motorized only.)

**Adjustable Limit Switches** – Fixed, end-of-travel limit switches built in to the end plate are standard on motorized XSlides. Moveable limit switches can be added as an option to motorized XSlide Assemblies. This is moveable. (Available on motorized only.)

**Encoders and VRO™ Encoder Readout** – For a high resolution position readout a rotary encoder and Velmex’s VRO encoder readout can be mounted to most linear XSlide assemblies. This is moveable. (Available on motorized only.)

**VXM™ Controller** – Step motors coupled with a motor controller like the Velmex VXM™ are a cost effective solution for accurate speed and precise incremental positioning. The XSlide has been designed with plug-run capability for the VXM.

**Motors** – XSlides are compatible with NEMA DC step motors – 17 or 23.

**XSlide Assembly combined with a Velmex Rotary Table** – XSlides can easily be combined with other Velmex products to make custom systems for specialized motion and positioning projects. (The system above also included Velmex framing components.)
More Positioning Solutions from Velmex

Velmex manufactures standard and custom linear and rotary motion-control positioning equipment for scientific, research, machining and industrial applications. Velmex produces UniSlide®, BiSlide® and XSlide™ manual and motor-driven assemblies; manual and motor-driven XY tables, rotary tables, elevating tables and turntables; VXM™ motor controls and VRO™ digital readouts. Products include slides, stages and actuators in a variety of configurations and a broad range of sizes and payload capacities.

Velmex UniSlide® Assemblies are available in a variety of configurations, models and sizes including Linear Slide Assemblies, Elevating Tables and XY Tables.

Velmex BiSlide® Assemblies offer durable, easy-to-configure, low cost and modular design for a highly effective and very versatile positioning device.

Velmex Rotary Tables deliver 360° of continuous motion for precise, continuous and incremental rotating for scanning, assembly, testing and production.

Visit the Velmex web site at www.velmex.com for more details and specifications on all the Velmex stages; along with motors, controllers, encoders and readouts. The site includes CAD files, numerous examples, news and updates.

Velmex is leader in delivering rugged, reliable, precision positioning systems at a reasonable cost. We have helped thousands of companies and organizations with solutions to the application challenges. If you need help in designing a positioning system, please contact us and talk with one of our Application Engineers.
